

ABSTRACT

A snap-together poster frame includes a plurality of edge supports, each comprising a plurality of segments having a slotted, channel-shaped cross-sectional profile to define a single opening having an unobstructed mouth for receiving an edge of a poster board. The segments include a top wall, a bottom wall and a sidewall joining the top and bottom walls. The edge support is resilient and the sidewall includes a generally L-shaped instep by which it is joined to the bottom wall having three flex points which allows the opening to adjust to the width of the posterboard inserted therein, thereby retaining the edge of the poster board via an interference fit.
